

Environmental and energy policy

Our environmental and energy policy is geared towards protecting the environment, to respond to changing environmental conditions in accordance with social and economic needs and to achieve a continuous improvement of energy-related performance, including energy input, energy consumption and energy efficiency. It is actively communicated by the supervisors and compliance is promoted and demanded. It also provides the MPT Group with the framework for setting strategic and operational environmental and energy objectives. Environmental and energy management means for us:

- to see operational health, safety and environmental protection as task of management and to carry out the here documented policy within all divisions of the company, which generate relevant performance for these tasks
- the obligation to develop, produce and distribute precision steel tubes in compliance with the relevant regulations, while adhering to the laws, regulations, public administrative rules and other obligations, including those relating to the context of MPT,
- to ensure compliance with the other requirements in terms of energy use, energy consumption and energy efficiency, as well as to communicate environmental / energy requirements to environment and energy relevant suppliers,
- an obligation to ensure the availability of information and all the resources necessary to achieve the strategic and operational objectives,
- to do investments in environmental protection taking into account economic interests, while supporting the acquisition of energy-efficient products and services intended to improve energy performance,
- the obligation to promote the awareness of the employees and to motivate them to take low-risk and environmentally conscious actions and to ensure a careful and safe handling of resources using the technology provided by MPT,
- to determine environmental and energy objectives, to publish them intra-company and to control them,
- the commitment to continual improvement of environmental and energy management systems to enhance environmental performance and energy-related services,
- to protect the natural basis of life against society and future generations by means of environmental and energy-consumption-oriented action and prepare the transformation to climate-neutral tube production,
- to inform customers, suppliers and the interested public via internet about environmental and energy policy at MPT.
